

To Whom it May Concern,

Our company Aztech Investments Pty Ltd trading as United Quality Wool is the largest buyer of contaminated wool in Western Australia and are now looking to expand throughout Australia. To date we export approximately one container per month of contaminated wool to China and currently have two agents in India sourcing local buyers.

At the moment we are paying between 30 cents per KG Greasy up to \$2.00 per KG Greasy depending on the Micron, Wool Length and amount of black and medulated fibres. At the moment in China we are achieving a price of around USD3.00 per KG clean weight. We current pick up all the contaminated wool at the lowering end of the Market and have seen at auction some contaminated wool fetching beyond our price above.

Our company recently send a technician to China to investigate the possibility of setting up a scouring facility in China. We are now looking at sending our wool to China where we will have it scoured, classed and sold. We are also looking a purchasing a wool insulation machine to make wool insulation in China.

Aztech Investments Pty Ltd is also a large exporter of Skins and Hides out of Australia. We currently understand that Damara and Dorper leather is becoming very popular in the Italian Market because of the high quality and fine Grain. One company currently pushing the growth of the Damara Leather Industry is Hall Damara.
